

# I don't flush

[idontflush.ca](http://idontflush.ca)

## What should I do with fats, oils and grease?

Don't pour that stuff down the drain!  
Cool it. Scrape it. Green bin it.

# Protect your pipes!

What happens when you put fats, oils and grease (FOG) down the sink or toilet? When they cool, they **form blockages**. FOG clogged pipes are **big trouble**. They can lead to **basement flooding and sewage overflows** onto streets and surrounding areas. These clogs can also **damage your local wastewater facility**, and your water rates may go up to cover **costly repairs**.

**BOTTOM LINE: Improper FOG disposal hurts your wallet and the environment.**

Put FOG where it belongs!  
Cool it. Scrape it. Green bin it.\*
